

# COMP 354: Introduction to Software Engineering

# **Agility and Process**

Based on Chapter 3 of the textbook

- Effective (rapid and adaptive) response to change.
- Effective communication among all stakeholders.
- Drawing the customer onto the team.
- Organizing a team so that it is in control of the work performed.
- Rapid, incremental delivery of software.

Cost of change Development cost using conventional software process Cost of change using agile process Idealized cost of change using agile process

Development schedule progress
COMP 354, Fall 2023
Agility and Process

- Driven by customer descriptions of what is required (scenarios).
- Customer feedback is frequent and acted on.
- Recognizes that plans are short-lived.
- Develops software iteratively with a heavy emphasis on construction activities.
- Delivers multiple 'software increments' as executable prototypes.
- Adapts as project or technical changes occur.

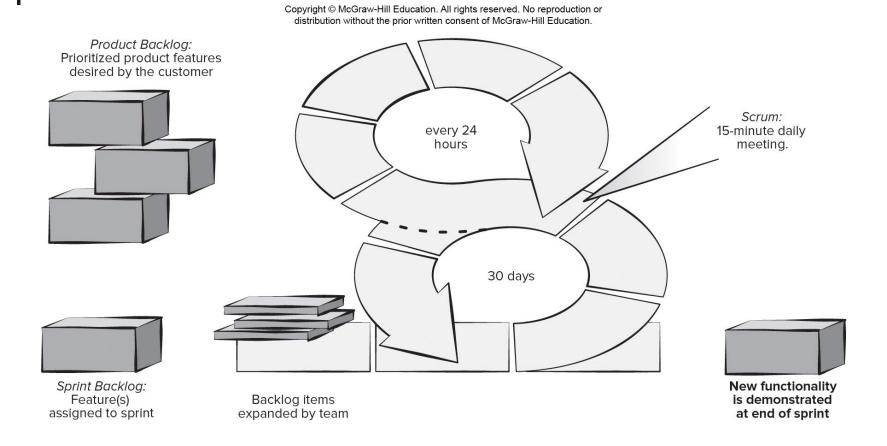

- Customer satisfaction is achieved by providing value through software that is delivered to the customer as rapidly as possible.
- Develop recognizing that requirements will change and welcome changes.
- Deliver software increments frequently (weeks not months) to stakeholders to ensure feedback on their deliveries is meaningful.
- Agile team populated by motivated individuals using face-to-face communication to convey information.
- Team process encourages technical excellence, good design, simplicity, and avoids unnecessary work.

- Working software that meets customer needs is the primary goal.
- Pace and direction of the team's work must be "sustainable," enabling them to work effectively for long periods of time.
- An agile team is a "self-organizing team"— that can be trusted to develop well-structured architectures that lead to solid designs and customer satisfaction.
- Part of the team culture is to consider its work introspectively with the intent of improving how to become more effective its primary goal (customer satisfaction).

# Scrum Framework

### Scrum Details

- **Backlog Refinement Meeting** Developers work with stakeholders to create product backlog.
- **Sprint Planning Meeting Backlog** partitioned into "sprints" derived from backlog and next sprint defined.
- **Daily Scrum Meeting** Team members synchronize their activities and plan work day (15 minutes max).
- **Sprint Review** Prototype "demos" are delivered to the stakeholders for approval or rejection.
- **Sprint Retrospective** After sprint is complete, team considers what went well and what needs improvement. COMP 354, Fall 2023

#### **Pros**

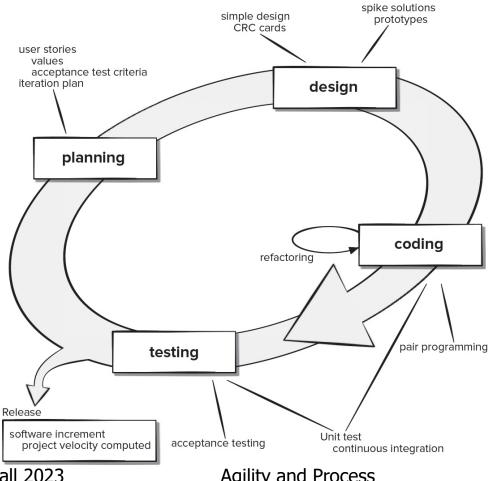

- Product owner sets priorities.
- Team owns decision making.
- Documentation is lightweight.
- Supports frequent updating.

#### Cons

- Difficult to control the cost of changes.
- May not be suitable for large teams.
- Requires expert team members.

# Extreme Programming (XP) Framework

COMP 354, Fall 2023

**Agility and Process** 

### **XP** Details

- XP Planning Begins with user stories, team estimates cost, stories grouped into increments, commitment made on delivery date, computer project velocity.
- XP Design Follows KIS principle, encourages use of CRC cards, design prototypes, and refactoring.
- XP Coding construct unit tests before coding, uses pair.
- XP Testing unit tests executed daily, acceptance tests define by customer.

#### **Pros**

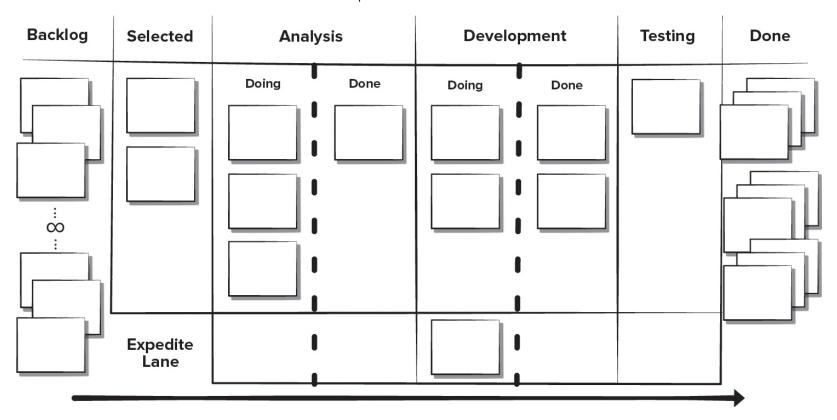

- Emphasizes customer involvement.
- Establishes rational plans and schedules.
- High developer commitment to the project.
- Reduced likelihood of product rejection.

#### Cons

- Temptation to "ship" a prototype.
- Requires frequent meetings about increasing costs.
- Allows for excessive changes.
- Depends on highly skilled team

# Kanban Framework

Copyright © McGraw-Hill Education. All rights reserved. No reproduction or distribution without the prior written consent of McGraw-Hill Education.

# Kanban Details

- Visualizing workflow using a Kanban board.
- Limiting the amount of work in progress at any given time.
- Managing workflow to reduce waste by understanding the current value flow.
- Making process policies explicit and the criteria used to define "done".
- Focusing on continuous improvement by creating feedback loops where changes are introduced.
- Make process changes collaboratively and involve all

#### **Pros**

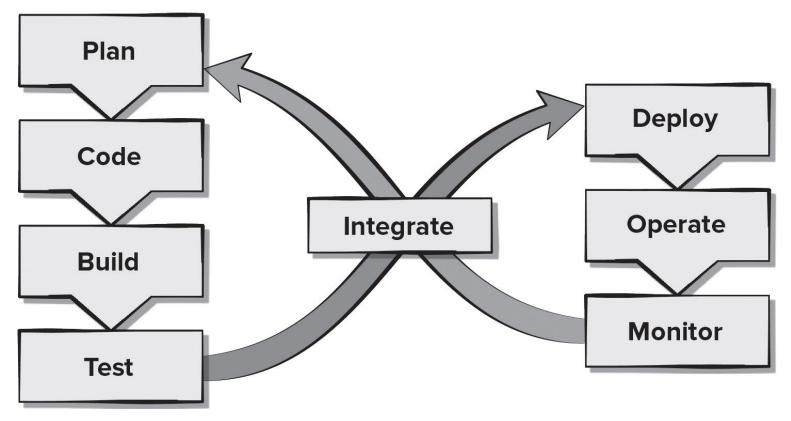

- Lower budget and time requirements.
- Allows early product delivery.
- Process policies written down.
- Continuous process improvement.

#### Cons

- Team collaboration skills determine success.
- Poor business analysis can doom the project.
- Flexibility can cause developers to lose focus.
- Developer reluctance to use measurement.

# DevOps Details

- **Continuous development.** Software delivered in multiple sprints.
- **Continuous testing.** Automated testing tools used prior to integration.
- **Continuous integration.** Code pieces with new functionality added to existing code running code.
- **Continuous deployment.** Integrated code is deployed to the production environment.
- **Continuous monitoring.** Team operations staff members proactively monitor software performance in the production environment.

COMP 354, Fall 2023

#### **Pros**

- Reduced time to code deployment.
- Team has developers and operations staff.
- Team has end-to-end project ownership.
- Proactive monitoring of deployed product. **Cons**

- Pressure to work on both old and new code.
- Heavy reliance on automated tools to be effective.
- Deployment may affect the production environment.
- Requires an expert development Agility and Process team.
